

 Lagunita is retiring and will shut down at 12 noon Pacific Time on March 31, 2020. A few courses may be open for self-enrollment for a limited time. We will continue to offer courses on other online learning platforms; visit <http://online.stanford.edu>.

Course Discussion Progress

Probability and Statistics (Open + Free - April 2017 release)

Dismiss

This course ends at 12 noon Pacific Time on March 26, 2020. If a Statement of Accomplishment is available for this course, it will be available for download until March 31, 2020.

Introduction

Introduction

Learning Strategies

The Big Picture

Introduction to Statistics Package Exercises

Contents

EDA: Examining Distributions

Exploratory Data Analysis (EDA) Overview

One Categorical Variable

One Quantitative Variable: Graphs

One Quantitative Variable: Measures of Center

One Quantitative Variable: Measures of Spread - Range, IQR, & Outliers

One Quantitative Variable: Measures of Spread - Boxplots

One Quantitative Variable: Measures of Spread - Standard Deviation

Examining Distributions Summary

EDA: Examining Relationships

Examining Relationships

Case $C \rightarrow Q$

Case $C \rightarrow C$

Case $Q \rightarrow Q$: Scatterplots

Case $Q \rightarrow Q$: Linear Relationships

Causation

Examining Relationships Summary

Exploratory Data Analysis Summary

Producing Data: Sampling

Sampling

Sampling Summary

Producing Data: Designing Studies

Designing Studies

Observational Studies

Experiments with One Explanatory Variable

Experiments with More Than One Explanatory Variable

Designing Studies Summary

Producing Data Summary

Probability: Introduction

Introduction to Probability

Probability: Finding Probability of Events

Finding Probability of Events

Probability Rules

Finding Probability of Events Summary

Probability: Conditional Probability and Independence

Conditional Probability and Independence Overview

Multiplication Rule

Conditional Probability and Independence Summary

Probability: Discrete Random Variables

Random Variables

Discrete Random Variables

Mean and Variance

Rules for Means and Variances

Binomial Random Variables

Probability: Continuous Random Variables

Continuous Random Variables Overview

Normal Random Variables

Normal Approximation to the Binomial

Discrete and Continuous Random Variables Summary

Probability: Sampling Distributions

Sampling Distributions

Sample Proportion

Sample Mean

Sampling Distributions Summary

Probability Summary

Inference: Estimation

Introduction to Inference

Estimation: Point Estimation

Estimation: Population Mean

Estimation: Population Proportion

Inference: Hypothesis Testing Overview

Hypothesis Testing Overview

Inference: Hypothesis Testing for the Population Proportion

z-test for the Population Proportion

Issues in Hypothesis Testing

Inference: Hypothesis Testing for the Population Mean

z-test for the Population Mean

t-test for the Population Mean

Hypothesis Testing Summary

Type I and Type II Errors

Inference: Relationships $C \rightarrow Q$

Case $C \rightarrow Q$

Two Independent Samples

Matched Pairs

ANOVA

Case $C \rightarrow Q$ Summary

Inference: Relationships $C \rightarrow C$

Case $C \rightarrow C$

Inference: Relationships $Q \rightarrow Q$

Case $Q \rightarrow Q$

Inference for Relationships Summary

Inference Summary
